

## ECOCOOLING FOR THE VISITOR CENTRE AT TY MAWR COUNTRY PARK

Celsius have installed an EcoCooling system in the Visitor centre at Ty Mawr Country park for Wrexham Council, the other option was to install an air conditioning system. However, Wrexham Council have strict Carbon emission targets to hit and the use of the air conditioning would have meant far more carbon being used.

Plan of the area illustrating the EcoCooling unit and attenuated extraction system, one system serves three areas.

The EcoCooling system not only keeps running cost and carbon emission to a minimum but also provides fresh air to the area and helps to keep odours to a minimum in the area that is used by school kids on a daily basis.

The installation was undertaken during normal working hours and did not affect the use of the area during installation.
