

UYT Limited are a joint venture between Unipart and Honda producing pressed body parts for the Honda site in Swindon, they have a massive site in Coventry.

Their large site in Coventry suffered from severe overheating problems around the numerous manufacturing cells.

To overcome this we installed a system of 14 no. Celsius evaporative cooling units blowing fresh, filtered, cooled air around

The system has minimal running costs at less than 10% of the running costs of a comparable air conditioning system and less than 50% of the capital installed cost.

The coolers are individually controlled from local control panels adjacent to the manufacturing cells to enable the personnel to control their own working environment.
