

## SHOPFLOOR FLOOR COOLING ON EVEN THE HOTTEST OF DAYS

GSM Automotive in Brecon, Wales, a key supplier to Jaguar Landrover, were experiencing exceptionally warm conditions on their shopfloor and this was affecting production and making working conditions very uncomfortable.

To remedy the problem Celsius installed 2 no. EcoCooling evaporative coolers with 2 no. roof mounted Celsius extraction fans.

Both systems are controlled from individual controllers, incorporating timeclocks (so free cooling at night can be utilised) and thermostats.

They were considering using air conditioning to cool the area, however, the EcoCooling system will cost less than £195 per annum to run, a massive saving compared to trying and cool such a large area with Air Conditioning

which would have cost over £3,266 per annum to operate.
