

MATSUURA MACHINERY ECOCOOLING SYSTEM WILL PAY FOR ITSELF IN UNDER 2 YEARS

Matsuura Machinery, a well-established and recognised market leader in automated machinery.

Their showroom and preparation facility based in Coalville, Leicestershire recently underwent a huge transformation which saw Celsius install 11 EcoCooling units, 11 extraction fans, 5 gas fired heaters and 30 destratification fans in a bid to cut running costs and drastically reduce their carbon footprint by eliminating all refrigerant gases.

Energy usage figures for the first couple of months of use indicate that it will pay for itself in under 2 years.

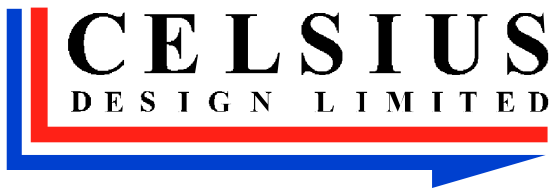

The area was previously cooled by using centralised air handling units using R22 gas and heated via two large boilers. Both these means of temperature control were costing many thousands to operate and maintain.

Initial running cost figures are showing a huge saving according to Matsuura's engineering manager, Simon Haywood. They are also expecting to save several thousand pounds per annum

on the servicing costs of the system, as the EcoCooling system is far easier to maintain.

Celsius undertook the complete installation including power and water supplies during normal working hours. The project was carried out with no downtime and created no implications on Matsuura's day to day operations.
