

## AE AEROSPACE CONTACT CELSIUS DESIGN FOR A SECOND INSTALLMENT OF ECOCOOLERS

AE Aerospace, a world-class supplier of high-quality machined components for the aerospace market, previously got in touch with Celsius to look at cooling their workshop, based in Birmingham. Celsius successfully cooled the area by installing 2 EcoCooling systems and 2 Celsius extraction units, achieving a combined cooling capacity of 70KW.

Due to significant company growth, AE Aerospace recently upgraded their workshop and moved to a bigger, more advanced site in order to cope with customer demands. Impressed with the EcoCoolers performance, AE Aerospace contacted Celsius Design again to look into cooling their new workshop, using the existing EcoCoolers from their old site plus 2 extra EcoCooling

systems and a further 2 large Celsius fume and heat extraction units, to tackle the extra volume of workspace needing to be cooled.

Celsius undertook the complete decommissioning and removal of the existing kit at the old site and re-installation including power and water supplies. All work was undertaken during normal working hours, working around AE Aerospace's advanced machining operations with zero interruptions.
