

PHARMACEUTICAL WAREHOUSE CONTACTS CELSIUS FOR 2ND PHASE OF ECOCOOLERS

Admedsol, a leading wounds and dressing manufacturer contacted EcoCooling and Celsius back in 2017 to look at cooling their new warehouse in Cheshire.

They required an environment which maintained temperatures between 5Co and 25Co all year round, adhering to the MHRA regulations (Medicines and Healthcare products Regulatory Agency).

After the success of the initial install, Admedsol got back in touch with Celsius 3 years later to look at more cooling for their main (much larger) warehouse, which like the first install would need to adhere the MHRA regulations and maintain a temperature between 5Co and 25Co.

To maintain these conditions Celsius installed 12 no. EcoCooling roof mounted evaporative cooling units, linked to 12 no. Celsius roof mounted extraction fans, each system controlled by its own timeclock and thermostats.

Similar to the first install Celsius also fitted a temperature mapping system using 19 no. remote rack mounted sensors and 1 no. external sensor, all readings can be viewed over the internet and detailed logs kept using the Celsius system.
