

AML USE ECOCOOLING FOR THEIR MACHINE WORKSHOP

AML specialise in titanium and nickel alloy machining and supply complex machined parts and expertise to the Aerospace industry.

The AML machining facility based in Sheffield, previously suffered from high working temperatures, before getting in contact with Celsius to design a suitable cooling solution to tackle the overheating problem.

Celsius installed 3 roof mounted, and 3 wall mounted EcoCooling units and 2 Celsius extraction fans mounted at high level. At a combined cooling capability of over 200kW, the EcoCoolers were able to comfortably meet the requirements and drastically reduce the working temperatures of the workshop.

Celsius undertook the complete installation including power and water supplies to both EcoCoolers. All work was undertaken during normal working hours, causing no disruption to AML's daily operations.
