

2ND PHASE OF ECOCOOLING FOR ELE

Back in June 2019, ELE Advanced Technologies contacted Celsius to design a suitable cooling solution for their machine workshop based in Colne, Lancashire. Celsius installed 4 EcoCooling evaporative coolers.

ELE were so pleased with the performance and results of the EcoCoolers, they contacted Celsius again for a 2nd install at their sister workshop also based in Colne.

Celsius installed 2 more EcoCoolers and 2 Celsius Extraction fans. At a combined cooling capability of over 70kW, the EcoCoolers were able to comfortably meet the requirements and drastically reduce the high working temperatures within the facility.

Celsius undertook all work during normal working hours, causing no disruption to the daily operations
