

ECOCOOLING USED TO COOL SPECIALIST PRINTING WORKSHOP

NJ Screen prints are renowned specialists in delivering high quality, high volume textile printing services to the retail trade, from small independent stores and high street fashion chains to supermarkets across the UK and Europe.

The printing workshop, based in Hinckley, Leicestershire previously suffered from high working temperatures due to the vast amounts of heat being produced from the printing process and a lack of ventilation within the facility.

Celsius were contacted and granted the opportunity to provide a suitable cooling solution to tackle the overheating problem.

Celsius initially installed 5 EcoCooling units, the EcoCooling system provides up to 175KW of cooling which managed to comfortably meet the requirements and drastically reduce the working temperatures within the printing workshop.

The initial install was so successful, NJ Screen prints got back in touch with Celsius to install an extra system, which was to be ducted into 4 separate rooms.

All work was undertaken during normal working hours, working around the personnel and the printing operations.
