

ECOCOOLING USED TO COOL SPECIALIST MANUFACTURING FACILITY

Walker Guidance Systems are renowned specialists in providing innovative manufacturing for high-criticality global applications.

The Walker Guidance Systems production facility, based in Basildon, previously suffered from high working temperatures, before getting in contact with Celsius to design a suitable cooling solution to tackle the overheating problem.

Celsius installed 4 wall mounted EcoCooling units and 4 Celsius extraction fans mounted at high level. At a combined cooling capability of over 140kW, the EcoCoolers were able to comfortably meet the requirements and drastically reduce the working temperatures of the workshop.

Celsius undertook the complete installation including power and water supplies to all EcoCoolers. All work was undertaken during normal working hours, causing no disruption to the sites daily operations.
